

ELEVATOR CONVEYOR

Engineered entirely from stainless steel and fully customizable, D&F's vertical conveyor is built to meet your plant's exact needs.

- Requires minimal floor space to elevate boxes to different heights
- Supports both elevation & decline
- Accepts a wide range of box sizes
- Fully washdown capable to meet strict hygiene standards & streamline cleaning
- Includes Indexing Meter Conveyor for proper box loading

**100%
STAINLESS-STEEL
CONSTRUCTION
FOR DURABILITY
AND SANITATION**

**CUSTOM-DESIGNED FOR
SPECIFIC ELEVATION
REQUIREMENTS**

- Equipped with a pneumatic stop to control incoming box spacing
- Features a stainless-steel control box
- Control box monitors downstream run signal for seamless integration
- Variable Frequency Drives included
- Stainless-steel drive assemblies utilized

D&F Equipment Sales, a trusted full-service equipment manufacturer and engineering supplier for the poultry, meat, and prepared foods industries has officially launched its latest innovation: a fully stainless steel, washdown-ready Elevator Conveyor system. Engineered to maximize vertical space and plant efficiency, this custom-built solution was hard-launched at the 2025 International Production & Processing Expo (IPPE) and is now being introduced as a solution for facilities seeking smarter, more sanitary material handling systems. Standard functionality of D&F's Elevator Conveyor is 100lbs per carriage and 30 units per minute, but it is customizable to fit specific plant needs with weight, size, and tray capacities.

From its flexible elevation capabilities to seamless integration with existing systems, D&F's elevator conveyor offers a tailored vertical solution that prioritizes efficiency without sacrificing plant real estate or sanitation.

Sanitation was a key design driver, especially for facilities operating under strict food safety protocols. Built entirely from stainless components, the system is fully washdown capable and designed for quick, efficient cleaning. This not only supports regulatory compliance but also minimizes downtime during cleaning and maintenance.

Whatever it Takes.
